

COMP 3350 Project Iteration 0

Group 5(Animal Inventory Management Application)

Vision:

7/7

- Vision summary
- Vision statement
- Does it conform with the interview?

Vision statement reflects the interview, first comment would be the fact that you are tackling an existing problem is a bonus. On top of that, automation of all existing features is well explained. Also as part of your interview, you have suggested some useful features which is also a good example of educating clients on their needs.

Planning:

8/8

- Big user stories for all iterations
- Detailed user stories for iteration 1
- Does it follow the preferences of the customer based on the interview?

You have categorize the big stories based on your upcoming iterations, plus your detailed stories for 1st iteration seems reasonable. Just the total cost allocated for your big stories for 1st iteration is 19 days but its detailed user stories total cost is 15 days, the total cost of detailed stories should match the total cost allocated for its respective big story. I see an empty page on page 4 and page 5? Are those empty or there is an issue with the PDF file? If so please make sure to correct it for your next iteration deliverables.

Total:

15/15
